

Tarun Reddy Alla

PROJECT MANAGER

Phoenix, AZ | (470) 437-2147 | tarunreddy.alla1@gmail.com | linkedin.com/in/tarun-reddy-alla | github.com/tarunreddy26

CERTIFICATIONS & HONORS

- AI Fluency: Framework and Foundations — Anthropic (2026)
- Claude 101 — Anthropic (2026)
- Complete Data Wrangling and Data Visualization with Python — Udemy (2024)
- Introduction to Artificial Intelligence (AI) — Coursera / IBM (2020)
- International Excellence Award — Northern Arizona University

EDUCATION

Northern Arizona University Flagstaff, AZ

Master of Science, Management Information Systems · GPA 3.7/4.0

Relevant Coursework: Project Management, Business Analytics, Database Management, Data Visualization, Systems Analysis & Design (SDLC), Statistical Analysis

Narasaraopet Engineering College Guntur, India

Bachelor of Technology, Computer Science · GPA 8.63/10

SUMMARY

Project manager with a software engineering background and a Master's in Management Information Systems from Northern Arizona University. I bridge engineering and business — planning timelines, managing scope and risk, and turning requirements into shipped software. Recent work spans leading cross-functional delivery of an AI platform and backend/QA for an early-stage startup, fluent in Python, SQL, Node.js, and modern cloud tools.

CORE COMPETENCIES

Project Planning & Scheduling · Agile / Scrum · Sprint Planning · Stakeholder Coordination · Risk Management · QA & Acceptance Testing · Backend Development · SQL & Data Analysis

EXPERIENCE

Oshi Mar 2026 – May 2026

Backend Developer & QA Intern · Remote

- Shipped a real-time WebSocket-based text-to-speech streaming backend (Node.js/TypeScript) to Render with CORS whitelisting, rate limiting, and structured logging; load-tested across 20 concurrent sessions with zero connection leaks.
- Led QA for an in-app purchases / virtual-currency monetization sprint — executed 33 tests across 3 sessions, uncovered a P0 exploit allowing unlimited free in-app items, and signed off all 9 acceptance criteria after fixes.
- Performed a full backend code review surfacing 16 bugs, including a critical Express middleware-ordering defect that would have broken every Stripe webhook signature verification in production.
- Designed and deployed a user-state persistence service on Supabase/Postgres with 3 REST endpoints, time-based state decay, and login restore powering the app's real-time reactions.

- Led cross-functional delivery of an AI antenna-design platform, coordinating ML engineers, RF/electromagnetics specialists, and manufacturing partners to ship a hybrid generative model (GAN + Diffusion) with physics constraints built in.
- Owned roadmap, requirements, and data strategy, scaling a training pipeline from thousands toward millions of EM simulations and integrating industry standards (VITA 49) to replace slow desktop simulation with rapid, standardized validation.
- Drove a design-for-manufacturability initiative, aligning engineering and fabrication teams to embed manufacturing constraints into the AI optimization loop — eliminating unbuildable outputs and ensuring clean export to CAD/Gerber formats.

PROJECTS

Agile Delivery — Campus Event Registration System (Project Management)

Jira / Trello, Scrum, Gantt, Notion

- Acted as project manager for a team build: authored the project charter, work breakdown structure (WBS), and risk register, and defined scope with stakeholders.
- Ran sprint planning, standups, and a retrospective; tracked progress with a Gantt chart and burndown, keeping the team on schedule.
- Coordinated a 5-person team across a multi-sprint timeline, managing task dependencies and re-scoping mid-project to protect the delivery deadline.

Team Task Tracker — Full-Stack Web App

React, Node.js / Express, PostgreSQL, Render

- Built a Kanban-style task management app with a REST API, user authentication, and drag-and-drop status tracking for assigning and monitoring team work.
- Modeled the data layer in PostgreSQL with relational schemas for users, boards, and tasks, exposing full CRUD operations through a documented REST API.
- Deployed to Render with environment-based configuration and input validation.

Operations Analytics Dashboard

Python, Pandas, SQL, Power BI

- Built an ETL pipeline ingesting a public operations dataset into SQL and transforming it with Python/Pandas.
- Automated data cleaning and validation so each refresh produces consistent, analysis-ready inputs.
- Designed an interactive Power BI dashboard surfacing throughput, cycle-time, and cost KPIs with a repeatable refresh process.

SKILLS

Project Management: Agile/Scrum, Sprint Planning, Backlog Management, WBS, Gantt Charts, Risk Management, Stakeholder Coordination, Jira, Trello, Notion

Programming: Python, SQL, JavaScript, TypeScript

Backend & Web: Node.js, Express, REST APIs, WebSockets

Data & Analytics: Pandas, NumPy, Power BI, Excel, ETL

Cloud & Tools: AWS, GCP, Docker, Git, Linux, PostgreSQL/Supabase

Quality: Test Planning, Acceptance Testing, Code Review
